Transporting Students with Special Needs
Complete re-creation and update to existing training course

Transporting students with special needs involves many challenges and requires focused training for both the drivers and the monitors. Our original course, created in 2010, is almost 11 years old and we have identified many ways to update and improve this course.

There are many changes in the new course, and these include:

1. The new course is built around a Safety Management System where all the hazards in transporting students with special needs have been identified and we then train the safe behaviors to remove or reduce these hazards.

2. Completely re-scripted, re-filmed and re-created all the programs.

3. Each program focuses on what we seek to achieve in presenting the training and the outcomes desired.

4. New additional program – Roles & Responsibilities of the Monitors/Attendants.

5. Each program now has an exam included at the end. We have also added an extensive 50 question final exam.

6. Shorter, sharper, more focused narration, delivered by multiple professional narrators.

New Course includes eight video-based training programs:

1. Overview & Legislation Requirements
2. Roles & Responsibilities of the Monitors/Attendants
3. Transportation challenges
4. Types of Special Needs
5. Lifts & Mobility Devices
6. Securement
7. Balancing Specialized Needs
8. Emergency Evacuation
9. Final Exam

Course is available on DVDs, Thumb Drive or via the web.

On DVD or Thumb Drive price is $1,975. Call for web delivery pricing.
